

Layout Command Control™ (LCC) Simple Node Information

Apr 25, 2021

S-9.7.4.3

Adopted as a NMRA Standard

The OpenLCB Standard document appended to this cover sheet has been formally adopted as a NMRA Standard by the NMRA Board of Directors on the date shown in the *Adopted* column in the *Version History* table below.

Version History

Date	Adopted	Summary of Changes
Feb 17, 2015		Initial version submitted for public comment
Feb 6, 2016	Feb 20, 2016	Changed document numbering from S-9.7.3.4 (Network & Transport Layer) to S-9.7.4.3 (Session Layer)
Apr 25, 2021		Changed LCC logo to include the ® symbol Changed "Layout Command Control" to have the TM symbol Added the NMRA Legal Disclaimer fine-print Changed the OpenLCB license to "Creative Commons Attribution-ShareAlike 4.0 International"

Important Notices and Disclaimers Concerning NMRA Standards Documents

The Standards (S), Recommended Practices (RP), Technical Note (TN) and Technical Information (TI) documents of the National Model Railroad Association ("NMRA Standards documents") are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading "Important Notices and Disclaimers Concerning NMRA Standards Documents."

Notice and Disclaimer of Liability Concerning the Use of NMRA **Standards Documents**

NMRA Standards documents are developed within the Standards and Conformance Department of the NMRA in association with certain Working Groups, members, and representatives of manufacturers and sellers. NMRA develops its standards through a consensus development process, which brings together volunteers representing varied viewpoints and interests to achieve the final product. NMRA Standards documents are developed by volunteers with modeling, railroading, engineering, and industry-based expertise. Volunteers are not necessarily members of NMRA, and participate without compensation from NMRA.

NMRA does not warrant or represent the accuracy or completeness of the material contained in NMRA Standards documents, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard or recommended practice, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, NMRA disclaims any and all conditions relating to results and workmanlike effort. In addition, NMRA does not warrant or represent that the use of the material contained in NMRA Standards documents is free from patent infringement. NMRA Standards documents are supplied "AS IS" and "WITH ALL FAULTS."

Use of NMRA Standards documents is wholly voluntary. The existence of an Laws & Regulations NMRA Standard or Recommended Practice does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the NMRA Standards documents. Furthermore, the viewpoint expressed at the time that NMRA approves or issues a Standard or Recommended Practice is subject to change brought about through developments in the state of the art and comments received from users of NMRA Standards documents

In publishing and making its standards available, NMRA is not suggesting or rendering professional or other services for, or on behalf of, any person or entity, nor is NMRA undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any NMRA Standards document, should rely upon their own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given NMRA Standards documents.

IN NO EVENT SHALL NMRA BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: THE NEED TO PROCURE SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD OR RECOMMENDED PRACTICE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

NMRA's development of NMRA Standards documents involves the review of documents in English only. In the event that an NMRA Standards document is translated, only the English version published by NMRA is the approved NMRA Standards document.

Official Statements

A statement, written or oral, that is not processed in accordance with NMRA policies for distribution of NMRA communications, or approved by the Board of Directors, an officer or committee chairperson, shall not be considered or inferred to be the official position of NMRA or any of its committees and shall not be considered to be, nor be relied upon as, a formal position of NMRA

Comments on Standards

Comments for revision of NMRA Standards documents are welcome from any interested party, regardless of membership. However, NMRA does not provide interpretations, consulting information, or advice pertaining to NMRA Standards documents.

Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since NMRA standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, NMRA, its departments, Working Groups or committees cannot provide an instant response to comments, or questions except in those cases where the matter has previously been addressed. For the same reason, NMRA does not respond to interpretation requests. Any person who would like to participate in evaluating comments or in revisions to NMRA Standards documents may request participation in the relevant NMRA working group.

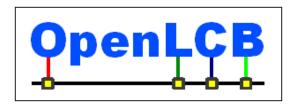

Users of NMRA Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any NMRA Standards document does not constitute compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. NMRA does not, by the publication of NMRA Standards documents, intend to urge action that is not in compliance with applicable laws, and NMRA Standards documents may not be construed as doing so.

Copyrights

NMRA Standards documents are copyrighted by NMRA under US and international copyright laws. They are made available by NMRA and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private selfregulation, standardization, and the promotion of modeling, structural and engineering practices and methods. By making NMRA Standards documents available for use and adoption by public authorities and private users, NMRA does not waive any rights in copyright to the NMRA Standards documents.

IMPORTANT NOTICE

NMRA Standards documents do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other systems, devices or networks. NMRA Standards documents development activities consider research and information presented to the standards development group in developing any safety recommendations. Other information about safety practices, changes in technology or technology implementation, or impact by peripheral systems also may be pertinent to safety considerations during implementation of the standard. Implementers and users of NMRA Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

OpenLCB Standard				
Simple Node Information Protocol				
Apr 25, 2021	Adopted			

1 Introduction (Informative)

This document defines the OpenLCB Simple Node Information Protocol, a light-weight method to request identification information from an OpenLCB node. The information returned is a few specific human-readable strings that allow the user to recognize the particular node, as well as supplying data to user interfaces to represent nodes.

2 Intended Use (Informative)

5

15

25

This Standard defines an optional protocol. Nodes may, but are not required to, implement this protocol.

The protocol does not depend on any transport layer protocol (such as Datagrams or Streams), thus the simplicity and low complexity makes it ideally suited to implement even in smaller nodes, such as Simple nodes.

A typical use of this protocol is for network browsers and configuration tools, which present the entire network with all its nodes to the user. When the user selects a node from a list, the human-readable strings as returned by this protocol could be used to represent the node instead of the 48-bit unique Node ID.

Nodes which have a user interface for selecting other nodes for interaction (e.g. a throttle selecting a train to operate) may also use the data supplied by this protocol to display to the user the selected or selectable nodes.

3 References and Context (Normative)

- 20 This is in the context of the following OpenLCB Standards:
 - The OpenLCB Message Network Standard, which defines the basic messages and how
 they interact, as well as how the messages are represented on a CAN network, including
 how to transport long messages in multiple CAN frames. The Message Network Standard
 also specifies the Protocol Support Inquiry and Protocol Support Reply messages, which
 are referenced here.
 - The OpenLCB Memory Configuration Protocol may be used alternatively to request overlapping or identical information from a node as provided by this standard. The OpenLCB Configuration Description Information (CDI) Standard defines how to interpret the configuration information. A specific option is ACDI, which, if present

Copyright 2011-2021. All rights reserved. This OpenLCB document is licensed under the Creative Commons Attribution-ShareAlike 4.0 International License (CC BY-SA 4.0). See https://openlcb.org/licensing for more information. Page 1 of 4 - Apr 25, 2021

30

gives access to the same information as the Simple Node Information Protocol via the Memory Configuration Protocol, but can also be used to change the user-provided information.

4 Message Formats (Normative)

4.1 Simple Node Information Request

Name	Simple Node	Dest ID	Event ID	Common MTI	Data Content
Simple Node Information Request	N	Y	N	0x0DE8	none

35 This message requests the destination node to send the Simple Node Information data to the source node.

4.2 Simple Node Information Reply

Name	Simple Node	Dest ID	Event ID	Common MTI	Data Content
Simple Node Information Reply	N	Y	N	0x0A08	payload bytes

This reply carries the Simple Node Information payload from the target node to the requesting node.

40

45

50

5 Payload Format (Normative)

5.1 Format

The reply payload is a sequence of bytes which is a concatenation of the following entries without any separator. The entries are of fixed or variable length.

The byte 0x01 or 0x04 to indicate the version of the following content

- separator. The
 - A null-terminated string for manufacturer name of no more than 41 bytes including terminating null.
 - A null-terminated string for node model name of no more than 41 bytes including terminating null.
 - A null-terminated string for node hardware version of no more than 21 bytes including terminating null.
 - A null-terminated string for node software version of no more than 21 bytes including terminating null.

- The byte 0x01 or 0x02 to indicate the version of the following content
- A null-terminated string for user-provided node name of no more than 63 bytes including terminating null.
- A null-terminated string for user-provided node description of no more than 64 bytes including terminating null.

5.2 Versioning

55

65

80

85

Future versions of this standard may extend the number of null-terminated strings in each of the two sections. In such case the version number at the beginning of the sections will be set to the number of null-terminated strings presented in the particular section.

Nodes must therefore accept data with either of the version numbers as presented in Section <u>5.1</u>.

6 Interactions (Normative)

6.1 Discovery

If a node supports the Simple Node Information Protocol, then the node must indicate so in the Protocol Support Reply message as defined by the OpenLCB Message Network Standard.

6.2 Request and reply

The requesting node sends a Simple Node Information Request message addressed to the destination node. The destination node should reply with one or more messages, each possibly being in one or more parts (frames), whose data content concatenated forms the payload, as defined in Section <u>5.1</u>.

Nodes implementing the Simple Node Information Protocol should prefer sending the reply in one message in multiple frames instead of sending multiple messages. Nodes requesting must be able to process replies arriving in one or more messages, each having single or multiple frames.

Nodes requesting data via the Simple Node Information Request message must wait for the entire reply to arrive before sending another Simple Node Information Request to the same destination node.

6.3 Stability

The information presented in the Simple Node Information Reply has to be constant. If the information changes, the node must enter Initialized state again and send out a Node Initialization Complete message (as defined by the OpenLCB Message Network Standard) to inform nodes that the information they may have cached needs to be refreshed.

7 CAN Adaptation (Normative)

There are no specific provisions for CAN transport. The messages are formatted on CAN transport as defined for generic addressed messages in the OpenLCB Message Network Standard. In particular, refer to the encoding of the nibble 'f' in the first data byte on CAN representing how individual frames of longer messages have to be encoded.
